## BIO-key Sponsors Industry-Leading Cybersecurity Conference, ISC² Security Congress 2023, in Nashville, TN, October 25 – 27, 2023 (Booth #113)
### *Showcasing cutting-edge phoneless, tokenless, and passwordless IAM solutions*

**Nashville, TN & Holmdel, NJ – October 25, 2023 -** BIO-key® International, Inc. (Nasdaq: BKYI), an innovative provider of workforce and customer Identity and Access Management (IAM) featuring phoneless, tokenless and passwordless Identity-Bound Biometric (IBB) authentication solutions, announced the company will sponsor and exhibit at ISC² Security Congress 2023. The industry-leading event will be held at the Gaylord Opryland Resort and Convention Center in Nashville, TN on October 25 – 27, 2023.

The ISC² Security Congress is an annual cutting-edge cybersecurity conference in its 13th installment. Leading technology professionals from across industries will gather to showcase breakthrough technology, share knowledge, and engage prospective customers, suppliers, and fellow vendors. This year's theme focuses on leading with confidence, where attendees have the opportunity to learn how companies like BIO-key are paving the way with unique solutions.

Implementing strong multi-factor authentication (MFA) and eliminating the use of passwords are top priorities for organizations of all sizes and across industries. Attendees are encouraged to stop by **booth #113** to learn how BIO-key's award-winning unified IAM platform, PortalGuard®, helps address this long-standing business security challenge with Identity-Bound Biometrics. IBB is BIO-key's core differentiator in the authentication category, allowing users to take advantage of a biometric passwordless authentication solution that does not require the use of phones or tokens. This unique capability fills a crucial key business use case gap that traditional MFA overlooks – providing an option that reduces overall total cost of ownership and provides the highest levels of usability and security.

"From shared workstations, to remote access, to users prohibited from having phones or tokens, enterprises face a complex and ever-changing landscape of access requirements," said Galen Rodgers, VP of North America Sales & Channel. "Traditional authentication methods are insufficient in many scenarios, and enterprises must explore new solutions that can offer flexibility to accommodate the needs of different users and various use cases while maintaining the highest level of security. These challenges underscore the importance of new and ongoing discussions that we'll have with ISC² attendees around the unique benefits of adding Identity-Bound Biometrics to their authentication, identity-first, and zero trust strategies."

**About BIO-key International, Inc. (**www.BIO-key.com**)**
BIO-key is revolutionizing authentication and cybersecurity with biometric-centric, multi-factor identity and access management (IAM) software managing millions of users. Its cloud-based PortalGuard IAM solution provides cost-effective, easy-to-deploy, convenient, and secure access to devices, information, applications, and high-value transactions. With industry-leading Identity-Bound Biometric (IBB) capabilities, BIO-key's patented software and hardware solutions enable large-scale Identity-as-a-Service (IDaaS) solutions and customized on-premises solutions.
