Press Release

BIO-key, awarded at the Computer Security Awards 2022

The company has been awarded in the Security Innovation Award category for its PortalGuard IDaaS solution.

Madrid, October 18, 2022 - BIO-key, a company with 25 years of experience in the field of cybersecurity and an international reference in the use of biometric scanners to authenticate digital identities of users, has been awarded at the latest edition of the Computer Security Awards, held in London. Specifically, it was recognized in the Security Innovation Award category for its PortalGuard IDaaS solution.

The prestigious awards are given by Computing Security, a British magazine specialized in the cybersecurity sector. Each year they recognize the work of the main players in this field worldwide. In this edition BIO-key has been awarded thanks to PortalGuard IDaaS, an Identity and Access Management platform that uses biometrics to offer single sign-on, multi-factor authentication, adaptive authentication and self-management password reset. PortalGuard can be used in the cloud as an Identity-as-a-Service (IDaaS) solution or on-premises, making it suitable for hybrid environments and capable of securing all possible user access scenarios.

"Awards like this one help us confirm that BIO-key is heading in the right direction. But far from making us complacent, these kinds of awards push us to keep working even harder to keep growing. We have just opened our European offices in Madrid and, of course, receiving this award is the confirmation that we have made the right decision by betting on the European market," said Alex Rocha, BIO-key's director in Europe. "The continent is one of the major international players in the cybersecurity sector, a vital area for all companies, both small and large. And within cybersecurity, biometrics is here to stay and will set the standard for years to come. Today it is the best way to certify user identities and, thanks to the applications developed by BIO-key and its work philosophy, this can be done in a non-invasive way for the user, respecting the privacy of their data," he concluded.

About BIO-key (www.bio-key.com)

BIO-key has more than two decades of experience providing authentication technology to thousands of organizations and millions of users and is revolutionizing authentication with biometric-centric, multi-factor identity and access management (IAM) solutions, including its PortalGuard IAM solution that provides convenient and secure access to high-value devices, information, applications and transactions. With industry-leading biometric capabilities, BIO-key's patented software and hardware solutions enable on-premise and cloud solutions, as well as customized enterprise solutions.
